

GEUTEBRÜCK

Efficient logistics control
Supply Chain Security

Hidden potential: Transparency in your supply chain

The logistics sector is booming – product flows are increasing, and with them, so are the demands of customers: Individual wishes, flexible capacity and low stock levels are needed while still ensuring reliable deliveries “just in time”.

The customer sets the tone. But how do you master this complexity? A key competitive factor is transparency. Uncover hidden potential by using supply chain visualization: Identify the sources of errors, control material flows and document process steps without gaps.

In short: Optimize your logistics processes continuously and identify profit potential across the entire value chain, saving time and money and impress your customers.

Innovative product development and successful, large-scale international projects have made us a globally recognized expert and one of the world's market leaders for “Made in Germany” video based solutions.

We successfully utilize our 50 years video security expertise in our logistics solutions.

This is what Geutebrück Supply Chain Security can do for you

Each supply chain worldwide contains an average of 14 interfaces! At each one of them risks arise. And even within the individual process steps, goods are damaged, misloaded or stolen. Always have a complete overview of your supply chain! Our solutions record the status of your goods at every point in time and down to the last detail. Your supply chain is visualized transparently and link between image and process data via flexible interfaces makes search operations quick and easy.

The overview

Which vehicles and persons are where on your premises?
Who can do what? Geutebrück SCS gives you the full picture.

Document efficiently

Each shipment is recorded at each point, with no gaps, and documented in video images without any additional work.

Fast search

Geutebrück SCS links video images with scanned codes.
Thus, the state of each shipment can be found within seconds.

Inbound

What is the state of the package when it arrives at your employees? Are there irregularities in the further processing? You can answer these questions quickly and efficiently: Starting at the receipt of the goods, each scan and weighing operation is documented without any gaps. Entry of the shipment data is sufficient to be able to check the status and completeness of the goods.

An overview of advantages of the solution

Package status at a glance

The status of your goods is documented fully, starting from delivery.

Fast search

Video evidence can be quickly and easily found using RFID or barcodes.

Work more efficiently

All evidence for insurance claims is prepared with a minimum of effort.

Outbound

Leave nothing to chance during picking and the transfer to shipping. All operations are fully documented: Are the goods complete and packed correctly? Are packets and pallets transferred to the shipping department without any irregularities? Just like for all other interfaces of your logistics, you can also track these steps, without any gaps, and check them quickly.

An overview of advantages of the solution

Package status at a glance

The status and contents of shipments are documented exactly at every interface.

Fast search

Video evidence can be quickly and easily found using RFID or barcodes.

Track loading mistakes

Incorrectly loaded goods are found quickly.

Parcel tracking

All process steps are recorded by the Geutebrück Supply Chain Security. Together with the complete integration of process data, this makes searching fast and easy: You can see all important data at a glance and can discover the exact points at which irregularities occur.

An overview of advantages of the solution

Package status at a glance

The status and handling of packages are documented along the complete path through your system.

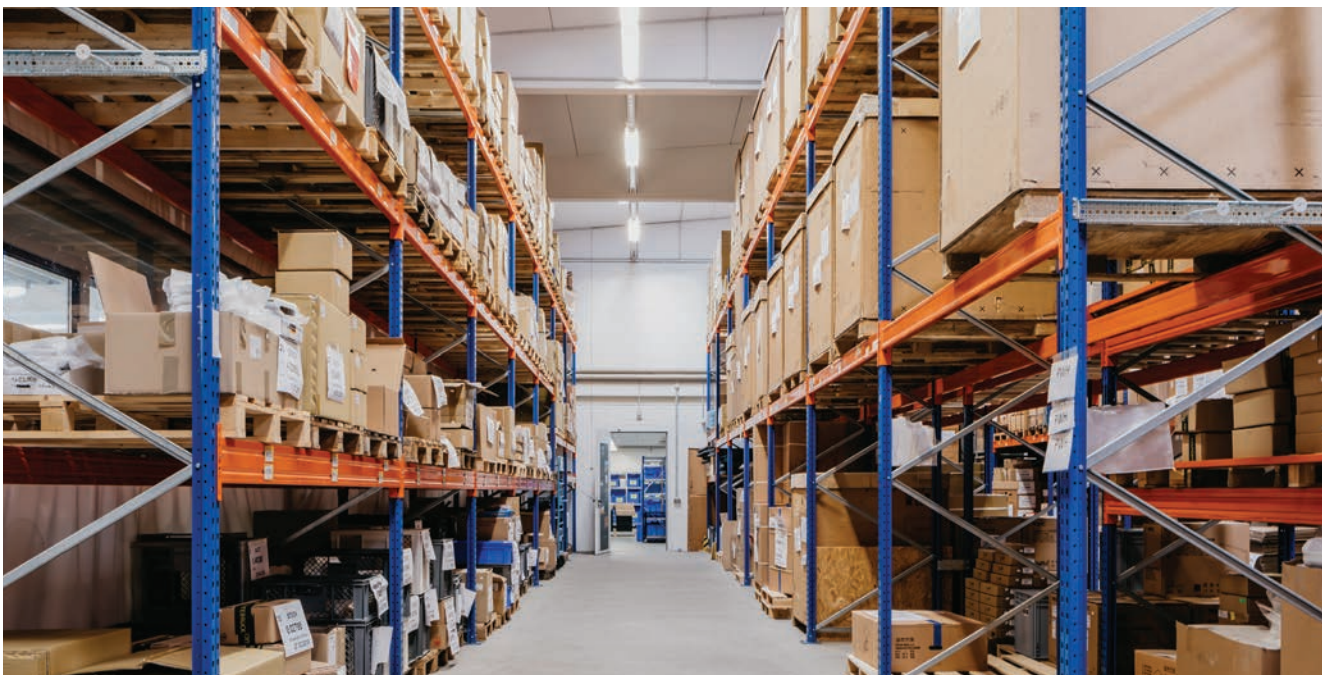

Fast search

Video evidence can be quickly and easily found using RFID or barcodes.

Easy export

Image documentation, for example as evidence for insurance claims, can be quickly and easily exported.

Shipment tracking

A lot can happen when processing the shipment of goods. With Supply Chain Security Geutebrück, you can see where a package or pallet is at any time. To do so, simply enter the bar code and you will immediately receive an overview of all linked camera images.

An overview of advantages of the solution

Simple tracking of goods

Camera linking and motion detection make it possible to quickly track goods.

Quickly find shipments

Find shipments quickly and easily by entering the bar code.

Process data at a glance

Visualize additional data, such as temperature and weight, with your video images.

Number plate recognition and access control

You have complete control of all vehicle movements on your premises. The number plates of cars and trucks are recorded at the entrance. In addition, using plate and trailer numbers, the permissions that a vehicle receives on your premises can be determined. No additional gate personnel is required.

An overview of advantages of the solution

Control of vehicle movements

Vehicle movements are recorded and documented precisely using number plates and vehicle data.

Efficient access permissions

Central processing and detailed access permissions make an efficient process possible.

Ready for audits

The requirements of security audits are fulfilled with easy-to-perform reporting.

Image documentation and search

Regardless of the in-house system that you use: Geutebrück Supply Chain Security can be easily integrated into your environment: Your employees search for video images in their customary work environment. More complex reports are just a click away.

An overview of advantages of the solution

Searches in the in-house system

All individual images of a process can be found using a reference number.

Two-stage search

With the click of a mouse in your in-house system, your search through the entire video material of an operation.

Simple interface

You can easily adapt our system via an interface to your inhouse system (SAP, Navision, etc.).

X-ray and scanning goods

For air shipments, the legal documentation requirements are particularly stringent. GEUTEBRÜCK Supply Chain Security makes it possible to provide gapless evidence of scanned shipments. This facilitates the documentation of more comprehensive inspections (sniffing, for example) for your customers.

An overview of advantages of the solution

Simultaneous recording of scanning

The complete inspection process is recorded simultaneously from multiple cameras, including the X-ray images.

Clear playback

All camera images are displayed synchronously. This allows you to maintain an overview when searching.

Access permissions

Extensive user management prevents misuse of data.
